This project has become a political ping-pong game with key politicians competing for exposure and votes, ensuring their names are always on the front pages as advocates for cleaner and safer environmental conditions. A couple of years ago, the atomic commission and the President allowed the testing of small atomic explosions to test the integrity of Yucca Mrs. The test revealed no fractures or ruptures which would allow contaminated wastes from nuclear stockpiles to seep or escape, in other words the site is safe, so let us go ahead and capitalize on its usage.

No public was not allowed this information, thanks to Clinton and his ilk. However the Japanese newscast from Canadian broadcasting station revealed this information because the mayors of Hiroshima and Nagasaki had written strong worded disapproval letters of the tests to the President et al. So why make this issue an endless game between the public and politicians? Give the green light and let us use the site for the good of our Nevada's economy.

Why not, it will not contaminate ground water, the roads are safer now than ever, and the chance of radioactive leakage is nil. You can not be that environmental sensitive, you at BLM, when you allow the Burning Man gala to desecrate the pristine native landscape.
